**Progression-Free Survival**

- Median PFS was significantly longer (p < 0.001) than the combined CT-only and ICT + CCR T regimens (Tables 7 and 8).

**Surgical Resection**

- The rate of surgical resection in PanCO was significantly greater than SOTA (p < 0.001; Tables 5 and 6).

**Conclusions**

- The results from the PanCO study provide a broad and consistently positive outcomes compared to standard-of-care CT-only and ICT + CCR T regimens.
